Title: UK Submission for IRG Working Set 2015
Source: UK
Status: National Body Contribution
Action: For consideration by JTC1/SC2/WG2/IRG
Date: 2015-11-02; revised 2015-12-12; regenerated with updated font 2019-10-13

This UK submission contains 1,640 characters to be considered for inclusion in IRG Working Set 2015. These characters derive from a wide variety of sources (see "Sources" on pp. 4–6 below), and have been suggested to us for encoding by various academics and experts from the UK, USA and elsewhere. The proposed characters comprise:

- 1,127 simplified characters corresponding to already encoded traditional form characters, mostly attested in the 2nd edition (2010) of *Hànyǔ Dà Zìdiǎn* 漢語大字典;
- 19 traditional form characters corresponding to already encoded simplified characters;
- 338 characters required by academics for the transcription of ancient texts (oracle bone inscriptions, bronze inscriptions, and Warring States period bamboo texts written in the Chu script);
- 156 other characters used in historical and modern sources.

A summary table of proposed characters is provided on pp. 7–156 below.

In addition to this document, this submission includes:

- a document providing evidence of character usage;
- an Excel file with all character attributes (main data file);
- a folder containing 128×128 bitmap images of all proposed characters.

The Excel data file includes these additional columns:

- j) the code point of the character in the TrueType font;
- k) the font glyph;
- l) other source references for the character if it has previously been submitted to IRG;
- m) mapping to the corresponding traditional form character or simplified form character, as appropriate;
- n) the total stroke count of the character, in Unihan kTotalStrokes format;
- o) notes on individual characters.

Withdrawn Characters

The following sixteen characters submitted in the first version of IRGN2107 have been withdrawn in this revised version of the submission, as they are either duplicates of or unifiable with encoded or proposed characters.

Justification for Encoding UK-02962 and UK-02963

UK-02962 归 and UK-02962 恅 are different versions of the same Khitan character meaning "main army", which are quoted in Song dynasty Chinese-language historical sources. These characters are not attested in any known Khitan Large Script inscriptions, and may well not accurately reflect the correct Khitan Large Script form of the character, and so would probably not be candidates for encoding in a future Khitan Large Script block. The two characters are only found embedded in Chinese texts, and can be considered to have been assimilated into the Chinese script, as they are written in the same style as the surrounding Chinese characters (see Figs. 1704 and 1705).

Scholars studying Khitan history need to be able to represent the Chinese historical texts using these characters in Unicode, and we believe that encoding these two particular characters as CJK unified ideographs is the most appropriate way of dealing with them. We do not intend for this to set a precedent for encoding Khitan Large Script characters attested in Khitan inscriptions as CJK unified ideographs.

This situation is similar to the case of the four characters 彝龜貔貅 in Ext. B, which are corrupted forms of the Tangut characters 敖羈燾𧕧 shown on a Tangut coin in the Song dynasty numismatic work *Quán Zhì* 泉志 by Hong Zun 洪遵, and later included in the *Kangxi Dictionary*.
